

### Sleek, Heavy-Duty Design

GE designed the Secured CTX Operator Workstation as an optional upgrade for the entire family of CTX scanners. Durable and roomy compared to other worktables and equipment carts, the Secured CTX Operator Workstation serves as a desk and lockable storage for all CTX interface equipment.

Fabricated from heavy-gauge steel, the secured workstation withstands constant use in rigorous airport environments and deters theft and vandalism of your CTX equipment. It is also equipped with wheels for easy transport and storage.

The workstation's unique desktop enclosure creates privacy for operators in public lobbies, and its ergonomic design helps reduce operator strain during lengthy screening sessions. Finally, it secures and hides all equipment wiring, eliminating clutter and presenting a professional bag-screening station to the public.

## Secures Your Valuable CTX Operator Equipment
